

METHOD FOR TREATING DIABETESAbstract of the Disclosure

A method is provided for first line treatment of
5 type 2 diabetes employing a combination of metformin and
glyburide. A method for treating diabetes in drug naive
human patients is also provided employing the above
formulation to reduce insulin resistance and/or post-
prandial glucose excursion and/or hemoglobin 1Ac, and/or
10 increase post-prandial insulin, thereby treating the
diabetes.
